

PEER REVIEW

How to apply it in your organization

Peer review is an evaluation of work by professionals of similar competence and organisations. It is a proven method to get useful, practical and high-quality recommendations for improvement and development of processes and organisations.

Peer review process described here has been inspired by EFQM Excellence Model (efqm.org), developed and adjusted by SISP Swedish Incubators and Science Parks and tested by IRIS project partners.

HOW IT WORKS:

USE IT TO:

- Get insight and learnings from colleagues
- Evolve as an incubator
- Connect with other incubators
- Develop your capabilities to support start-ups and SMEs

- Self-assess your organization based on a predesigned template; share it with reviewers
- Host reviewers (3-4) in your organization: provide with more context, challenges, host presentations by stakeholders
- Reviewers analyse and evaluate the information provided and give their recommendations on-site
- Management improvement plan is composed
- Host organization chooses recommendations for testing
- Test of recommendations is performed
- The test results and experiences are reported on a template provided by IRIS
