Process structure and sustainability coordination

To efficiently implement sustainability aspects into the whole procurement / purchasing process, thought is needed in all parts of the process.

- It cannot be included the last week before advertising a tender.
- Coordination of the work by a function in the organisation gives clarity for everyone involved.

Main product and service groups	Sub-categories of products and services	Chemicals				Climate			Circularity			
		Content of hazardous substances in	Avoidance of materials and products (e.g. certain types of plastic, paints) that have health or environmental risks of chemical substances during the following life cycle stages:			Energy efficiency	Renewable energy use	GHG and air pollutant emissions reduction	Durability and lifespan extension	Waste prevention and reduction (e.g. food waste prevention at retail level)	Reuse, refurbishment and repair	Recycling recycled materials in products
Packaging	Sales/primary packaging											
	Group/secondary packaging											
	Transport/tertiary packaging											
Textiles	Clothes (professional clothing)											
	Bed linen, towels (e.g. pillows, duvets, mattresses)											
	Laundry services of textiles, including rental garments and other textiles											
Plastic-containing consumables	Office supplies (e.g. folders, pens)											
	Kitchen utensils (e.g. dishes, trays, spoons, spatulas)											
	Single-use FCM (plastic coating)											
	Waste bags											
	Other plastic bags (FCM)											
	Toys and art/play materials for schools, kindergartens, etc.											
	Medical devices (e.g. bandages, plasters)											
Construction material	Construction services (e.g. paints, flooring material, insulation materials, adhesives and fillers)

Circularity

Construction materials

The ChemClimCircle matrix

Application for construction and related materials – construction of a new pre-school in Västerås

- **Focus on chemicals:**

- Building materials will be logged in the BVB logbook.
- Aiming at > 20% of the materials assessed as recommended.
- Floors will be PVC-free. One argument is the results from the preschool dust sampling.
- Aiming for “Miljöbyggnad gold”(certification)

- **Focus on circularity:**

- Architects are searching for circular and re-used products as much as possible.
- Aiming for “Miljöbyggnad gold”.

- **Focus on climate neutrality:**

- Aiming for “Miljöbyggnad gold”.
- The construction company and the architect company are dedicated in finding sustainable solutions for the preschool.

Goals in the tender:

- A safe, healthy, creative and stimulating preschool.
- An attractive workplace for pre-school teachers and other staff.
- Create opportunities for future other operations in the building.
- Materials chosen with great care:
 - Reduce the consumption of finite resources
 - Low climate impact
 - Very low levels of hazardous substances.
 - The tenderers needed to describe how they will fulfil these requirements.

How to measure impact?

- There are methods to measure impact on climate effects.
- Methods are needed to measure impact of criteria for chemical aspects and circularity as well!
