

Raising awareness and implementing waste management practices

The pilot in Daugavpils municipality aimed to reduce plastic waste in the Development Department.

START HERE

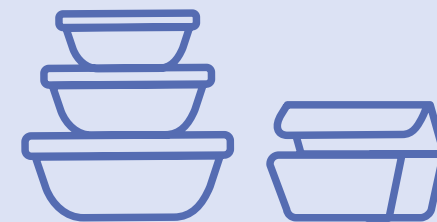

Increased awareness

Employees gained a clear understanding of the types and amounts of plastic waste they were generating.

Improved waste management

The department began recycling plastics and metals with plans to continue these practices.

Behavioral changes

Employees started making more sustainable purchasing decisions, considering packaging alternatives.

Active participation

The Development Department staff actively engaged in discussions and took conscious steps to reduce plastic waste.

Successful collaboration

Effective communication with the cleaning staff was established, ensuring proper waste separation for inventory tracking.
